Tools to be used
Step 1: Excel - Data Exploring
Step :2 Miro - Brain Storming
Step 3: Canva - Timeline Mapping
Step 4: Databricks - Data Aggregation
Step 5: Pivot Tables & Graphs
Step 6: Power Point - Build A Presentation

Mission to grow revenue and improve product performance

which product sells the most on weekends vs weekdays
- Product id
- days of the week (weekday vs weekends)
- transaction ids

Cheapest and highest product sold
- Unit Price
- product type

Number of products sold
- sum Transaction qty

Names of stores/ Locations
- Distinct Store Location

Start and end date of data collection
- start and end date of collection

Most popular day of the week
- days of the week
- Count(Distinct transaction_id)
- group by day of the week

Time that we are most busy
- Transaction Time
- Days of the week
- Transaction_qty

Monthly Revenue
- Transaction_date(months)
- sum(Transaction_qty)
- Sum(unit_price)

most Popular Location
- store location
- store id
- transaction_qty

Times of the day that we are not busy
- transacion_qty
- Trans_id
- Trans_Qty
- Unit_Price

Popular product category
- By Highest Transactions
- By Highest Revenue
- product id
- unit price
- SUM(Transaction_qty)
- product category
- group by product category

Top 3 Popular Product Type
- Product type
- product ID
- Trans qty

Popular product category according to the day of the week
- Qty sold per day of the week
- Revenue made per day of the week
- product type
- trans qty
- day of the week
- transaction time

which days are more popular between weekends and weekdays
- distinct transaction id
- day of the week
- group by weekday vs weekend

Number of Sales per week
- Date Trunc Transaction date
- count transaction ID

revenue from each product id/product category
- sum(unit price)
- product category
- group by product category
